

TRUMPF TECHNICAL QUOTATION #101508

ADDENDUM

Solid State Flat Sheet Laser Cutting Machine

TruLaser 3030/3040/3060 fiber

TRUMPF Laser Technology for Sheet Metal and Plate Processing

TRUMPF Power by the Hour Program

This machine is being sold under TRUMPF's Power by the Hour Program, to enable you to take advantage of higher productivity and capability when necessary, by switching between two power levels of 6kW and 10kW, and lower monthly costs when demands are lower.

When additional productivity is required on the machine you may elect to boot up the machine from the 6kW to a 10kW power level. No other changes to the machine are necessary and no TRUMPF service call is required to switch between the two power levels.

TRUMPF's Condition Monitoring Service will automatically track the hours the machine was cutting by laser beam-on time at 10kW, herein actual usage. Information will be sent from the machine via cloud to the TRUMPF Condition Monitoring Portal.

EACH BEAM-ON MINUTE AT 10KW COSTS \$2 PER MINUTE. On the first day of each month, TRUMPF will invoice you for the 10kW minute usage consumed during the prior month with payment terms of Net 30 Days from invoice date.

To enable using the higher laser power capability, the following must be met:

1. **CONNECTIVITY:** The machine must have a constant internet connection to enable connectivity for usage data check and accurate billing.
2. **PURCHASE ORDER:** A Purchase Order is to be issued by the customer under which TRUMPF will invoice the 10kW power usage. TRUMPF will invoice monthly the actual usage and deduct from the purchase order until the value of \$225,000 is consumed. The Purchase Order is to reflect the following:
 - a. Issued to TRUMPF Inc.
 - b. Utilization of 10kW laser beam-on power level with the TruLaser 3030/3040/3060/3080 fiber per the Power by the Hour Program option.
 - c. Billing under this PO not to exceed \$225,000.
 - d. Payment Terms Net 30 Days from Invoice Date.

- e. TRUMPF Inc. Terms and Conditions of Sale as set forth in this TRUMPF TruLaser 3030/3040/3060/3080 fiber Technical Quote govern this PO.

- 3. MISSING DATA:** In case of missing data due to an interruption to the internet, the customer is expected to provide TRUMPF the actual usage of laser beam on at 10kW through the log files. TRUMPF will then invoice the amount based on the data provided by the customer. If the customer refuses to share the missing data, he will be invoiced the maximum number of hours for the respective period. If the interruption of connectivity lasts longer than 3 months, the customer will be invoiced the maximum amount for the respective period, based upon the customer's working days and shift schedule.

At any point after machine installation, the customer may elect to purchase the 10kW power level for \$225,000 (list price with machine \$200,000). The full amount of prior usage payments received will be applied toward the purchase amount. Additionally, after reaching and paying for the \$225,000 amount, the customer will own the 10kW and be able to run the machine at 10kW at no additional monthly usage charges. After a full purchase of the 10kW power level, the customer can opt out of the connection to the Condition Monitoring Portal.

Provided that title of the machine has passed to the customer, should the customer wish to sell the machine prior to (i) reaching the buy-out amount or (ii) purchasing the additional power, the machine will continue to operate as a 6kW machine. If the customer wishes to sell it as a 10kW, the customer may elect to pay the balance between the amount paid and \$225,000.

TRUMPF Inc. Terms and Conditions of Sale as set forth in this Technical Quotation apply to this Addendum.
